

front end :

>The front end is a framework of the website Or a app creation .

>For structure creating html.

>For the color adding layout desinging its css.

>For the functions and the animations that to add in the web is java script.

>For the framework is that we are using the react angular js to run:neocities.

backend:

> For the backend to run the msg engine to run is we using the python
java or php as we want nodejs plus express for beginner friendly.

> As the api is have to connect to the fornt end that request the data
and engine runswe are using js here to connect eg:restapi .

> To run:railway.

> https is use to make connect the front end to the back end throung the
link

> Frontend sends message → Backend receives → DB stores → Backend sends
response.

data base:

> The data base wee use any data base like my sql to store anything as a response or the
customer data to control to store .

version control:

> We have the git hub that many of our version or code will store there
securely which can be revine our code back and see or update our old version
or we can change through the git hub by changing.

seo:

the seo is the making of the website that the suggest in the top of the
the search it might have call like a crack in the google

UI AND UX :

Aspect	UI/UX Designer	Frontend Developer
Focus	Design, look, feel, and usability of the app	Implementation of the design in code
What they do	Create mockups, wireframes, prototypes , choose colors, fonts, layout, and plan user flow	Write HTML, CSS, JavaScript , integrate with backend, make the site interactive

Aspect	UI/UX Designer	Frontend Developer
Tools	Figma, Adobe XD, Sketch	VS Code, React, Angular, Vue
Goal	Make the app beautiful and easy to use	Make the app functional and interactive

It is framework which is not workable just the design and the function that how the real app will work its not the front end its just designing before the front end developer develop a real app its a non - coding .

The deepsite is a ai that helps as to clone the webpage or making the website through the ai that all work will not complete by the ai technology but it is is helps us to reduce the work
